Glaskasten model train display cases, now also for O scale

GK01 - 1.2 m wide O scale display case

Design

The minimalist design of the Glaskasten display cabinet with frameless glass doors and side panels allows you to view your valuable collection of model trains from all angles, while they are protected from dust and damage.

The GK01 can accommodate almost 5 metres of O scale trains over 4 shelves.

Scale and gauge

Shelf spacing is suited for O scale models at 1:43.5, 1:45 and 1:48, with integrated "catenary" at the right height to hold the pantograph in the right orientation.

The GK01 display case can be supplied with different track, making it suitable for O, Om and Oe gauge models.

Integrated lighting

The integrated low energy LED illumination system is designed to make the models stand out from the background. Optionally, an integrated dimmer is available.

Powered track

The version with light is also available with powered track, allowing you to use the sound and light functions of your models.

Even an integrated roller stand is available to bring motion to your model train display case.

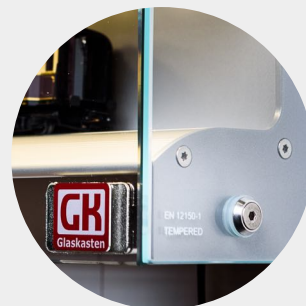

Easy wall mounting

Glaskasten display cases are equipped with an advanced wall mounting system, which allows for easy levelling after mounting the cabinet to the wall.

Materials

Made from high quality components and durable materials such as aluminium and tempered glass.

Glass doors

The high quality door hinges are easily adjustable.

Because your collection is worth it

Glaskasten Modular System - also in O scale

Glaskasten display cases are part of a modular system which can be extended horizontally and vertically by mounting multiple base cabinets next to and/or above each other, thus creating one continuous model train display wall. If you mount multiple display cases side-by-side, there are no intermediate glass separations, so very long continuous trains can be displayed. The table below shows a few examples of display cabinet assemblies.

Dimensions

The base Glaskasten module is 119 cm wide and 73 cm tall (47 x 29"), but you can assembly as many beside or above each other as you wish. In practice, placing more than 2 above each other may not be practical, because the models may become hard to reach, but the width is unlimited.

configuration	dimensions (cm)			base cabinet		with LED lighting*	
	width	height	maximum train length	without track	with track**	without track	powered track**
GKO1 	119	73	118	€ 799	€ 878	€ 999	€1098
GKO2 	237	73	236	€1550	€1708	€1950	€2148
GKO3 	355	73	354	€2250	€2487	€2850	€3147
GKO4 	473	73	472	€2895	€3211	€3695	€4091

* Optionally, an integrated LED dimmer is available, €49

** O gauge (32mm), narrowgauge available on request

The possibilities are endless

Glaskasten display cases are meant to be mounted to a vertical wall, but if you have no vertical walls, or if you would like to place the display cabinets on the floor, Glaskasten can offer solutions where the display cases are integrated into a modular wall system. Please contact info@glaskasten.de for more information.

GKO3 - Three O scale modules side-by-side

Ordering

Because there are so many possibilities, modular display cabinets will be different every time, therefore you will find only a few configurations in the Glaskasten webshop. If you are interested in different configurations, please contact us by email (info@glaskasten.de) or telephone (+31 487 761 069). We can then discuss the best solution for your situation.

This display cabinet consists of 2 modules side-by-side and 2 above each other. These are H0/N modules to illustrate what is also possible with O scale display cases.
