

## Glaskasten, setting the new standard for model train display cases

GK1L : 1.2 m wide display case

### Integrated lighting

The integrated low energy LED illumination system is designed to make the models stand out from the background. Optionally, an integrated dimmer is available.

### Scale and gauge

Shelf spacing is suited for H0 models, with integrated "catenary" at the right height to hold the pantograph in the right orientation.

The GK1 is also suitable for N gauge, because you can slot N-gauge track into a special groove, after which N or H0e models can be put into the display case.

### Design

The minimalistic design of the Glaskasten display cabinet with frameless glass doors and side panels allows you to view your valuable collection of model trains from all angles, while they are protected from dust and damage.

The GK1 can accommodate more than 9 metres of model trains over 8 shelves.

### Glass doors

The high quality door hinges are easily adjustable.

### Materials

Made from high quality components and durable materials such as aluminium and tempered glass.

### Easy wall mounting

Glaskasten display cases are equipped with an advanced wall mounting system, which allows for easy levelling after mounting the cabinet to the wall.

# Glaskasten Modular System

Glaskasten display cases are part of a modular system which can be extended horizontally and vertically by mounting multiple base cabinets next to and/or above each other, thus creating one continuous model train display wall. If you mount multiple display cases side-by-side, there are no intermediate glass separations, so very long continuous trains can be displayed. The table below shows a few examples of display cabinet assemblies.

## Dimensions

The base Glaskasten module is 119 cm wide and 73 cm tall (47 x 29"), but you can assembly as many beside or above each other as you wish. In practice, placing more than 2 above each other may not be practical, because the models may become hard to reach, but the width is unlimited.

configuration	dimensions (cm)		maximum train length	no. of shelves	base cabinet	with lighting
	width	height				
GK1 	119	73	118	8	€ 695	€ 895
GK2 	237	73	236	8	€1295	€1695
GK3 	355	73	354	8	€1895	€2495
GK1x2 	119	146	118	17	€1295	€1749

## The possibilities are endless

Glaskasten display cases are meant to be mounted to a vertical wall, but if you have no vertical walls, or if you would like to place the display cabinets on the floor, Glaskasten can offer solutions where the display cases are integrated into a modular wall system. Please contact [info@glaskasten.de](mailto:info@glaskasten.de) for more information.

GK3 - Three modules side-by-side

## Ordering

Because there are so many possibilities, modular display cabinets will be different every time, therefore you will find only a few configurations in the Glaskasten webshop. If you are interested in different configurations, please contact us by email ([info@glaskasten.de](mailto:info@glaskasten.de)) or telephone (+31 487 761 069). We can then discuss the best solution for your situation.

This display cabinet consists of 2 modules side-by-side and 2 above each other (GK2x2).
